

SCIFINDER TRAINING SESSION AT IMPERIAL COLLEGE LONDON

THURSDAY 2nd MAY 2019

16:00-18:00

This session will go through an orientation of the content and features of SciFinder including some hands on practice with given examples.

We will learn how to use SciFinder to get us to the relevant answers we need to help with current research and studies. Additionally, we will discuss how we can use SciFinder in finding future career or research opportunities.

What we will cover in this session

1. What is SciFinder and why should I use it
2. How to find relevant literature references using keyword terms
3. The use of refine and analyse options to add focus to searches
4. The most effective way of searching for specific substances
5. Exploring the information relating to substances
6. Searching substances by structure – what do we retrieve and why
7. Creating generic searches to broaden our scope
8. Finding suitable reactions for the synthesis of substances or their use as reactants

I will also address any specific questions an attendee may have, either during the session or at its conclusion.

This session will be taken by Dr Anne Jones and Dr Joelle Gola of CAS
